Module 9: Kubernetes Assignment

Problem Statement:

A developer wants to the following task:

Use this github https://github.com/hshar94/helloworld
1. Create a 3 node setup of Kubernetes Master and Slave
2. Use the docker image which you created Docker 1 assignment
3. Deploy 2 pods with the same container but different index.html content, modify the content from the above github to the following:
   Pod 1: "Welcome to Pod 1"
   Pod 2: "Welcome to Pod 2"
4. Each pod should have 2 replicas
5. Create the desired services for these pods
6. Setup path based routing on these services, which can be accessed from the outside
   "/pod1" -> service 1
   "/pod2" -> service 2
